

# Introducing ...

**X10DR Lite** - the liberating, wireless microphone for **every other mobile user.**

## **X10DR®** **Lite**

**Secure Wireless Microphone**

Since the creation of the first mobile two way radio, there has been one constant and ageless problem; when you get out of your vehicle ..you stop communicating!

For over five years, Wireless Pacific's patented X10DR Secure Wireless Microphone has enhanced the working lives of Police officers, Fire fighters, Paramedics and Utility workers globally by allowing users to communicate simply and effectively for up to 500m (1600') from their vehicles with a small, cost effective wireless remote speaker microphone... that simply ..works!

Having passed the stringent Public Safety audition, we have now repackaged that same, simple out of vehicle communications capability but without any of the first responder features and associated cost.

Introducing **X10DR Lite ... Now every one is free to talk!**

**- UP TO 300 METERS RANGE**

**- USE IN & OUT OF THE VEHICLE**

**- LOUD CLEAR AUDIO**

*Liberate Your Mobile Radio™*

**... Just Talk & Listen**

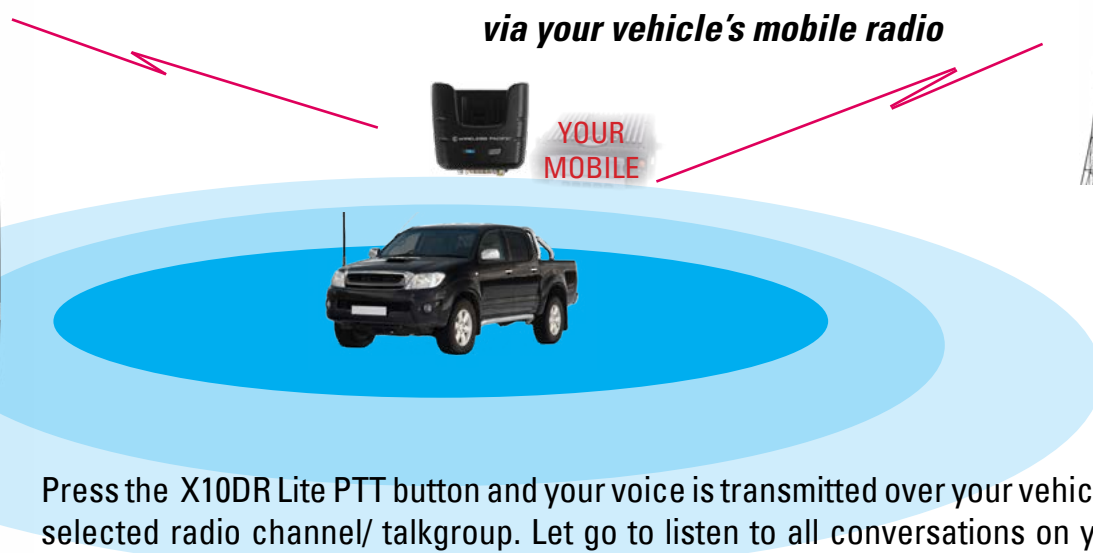

**up to 300 meters from your vehicle ...**

## How it works

**X10DR**<sup>®</sup>  
LIBERATE YOUR MOBILE RADIO

### **SECURE WIRELESS COMMUNICATION**

*via your vehicle's mobile radio*

Press the X10DR Lite PTT button and your voice is transmitted over your vehicle's selected radio channel/ talkgroup. Let go to listen to all conversations on your radio channel... up to 300 meters (1000')\* from your vehicle ...simple as that.

**up to 300 meters from your vehicle ...**

### So what's so special?

Perhaps of most significance, X10DR Lite enables your entire work team to fully maintain that invaluable team spirit - work ethos that comes solely from entrusting an organization's wireless communications to an "open channel" two way radio system.

X10DR Lite's out of vehicle capability ensure all team members continue to hear all conversations instantly, so all your team know what is going on, no matter whether they are heading down a highway or out of the vehicle doing what they are employed to do.

*\* typical line of sight coverage range but dependant on geographic and RF environmental conditions*
